

**DRAFTER'S NOTE  
FROM THE  
LEGISLATIVE REFERENCE BUREAU**

LRBa2234/P1dn  
RCT:nwn:jf

April 16, 2010

Christian Plata:

The instructions for this amendment indicated that if a producer is found in violation of the somatic cell count limit, the producer would also have to keep the somatic cell count level under 200,000 for the duration for the 6-month suspension. I am unsure what is intended by this, given that the producer would be prohibited from selling unpasteurized milk during that period. If you want something like this, I will need more of an explanation. Also if a requirement like this is added, what should be the consequence of violating the requirement?

I drafted this as a preliminary draft so that it could be redrafted without needing to have the jacketed copy (the stripes) sent back. If the draft is satisfactory as is, please let me know and I will convert it to an introducible version.

Please contact me with any questions or redraft instructions.
